

# High-resolution Aerial Imagery

How the best-in-class tools and custom mapping can improve your next construction project.

## Introduction

Utilising the latest in high-res aerial imagery, Search Commercial provides our users with a unique opportunity to understand your next property & construction project.

Search Commercial can improve your process in 3 fundamental ways:

### Showcase your property with the highest quality images

Let Search Commercial be your eye in the sky! Our platform provides state-of-the-art aerial imagery with a resolution far superior to what is achieved through satellite imaging – enabling you to derive valuable insights without leaving your desk.

Conduct due diligence and site analysis at various stages of the project delivery process utilising our database of historical imagery. With multiple captures per year allowing for periodic & timely analysis, understand site deterioration over time and presence of change to both building & land improvements.

Looking back can be effective however using up to date high resolution aerial imagery can be just as powerful. Utilising our high-res imagery can help you consider roof compositions, review building improvements and verify access points; also consider site vehicle parking and material drop off points before you step on-site. Streamline the initial required understanding of your project by using Search Commercial.

Let Search  
Commercial be  
your eye in the  
sky

## Consider land attributes and analyse from your office

We offer the ability to complete a desktop review to identify unique land attributes of interest such as vegetation, potential fauna habitats and local waterways – these site factors will all require risk mitigation measures when the time comes to activate the site. It's important to also consider the distance from various other public amenities which may impact the construction methodology. All of these considerations are crucial for any project.

## Remotely review specifications and site measurements

With Search Commercial, you will have the ability to review key property information such as land area and frontage. We have implemented a measurement tool integrated with our high res imagery to calculate a site's length, width, and area with accuracy. This allows you to access data at any time, with an unrivalled level of detail and clarity. With the ability to save search parameters and map out key locations within your console, your team will be able to review important details on-the-go with ease.

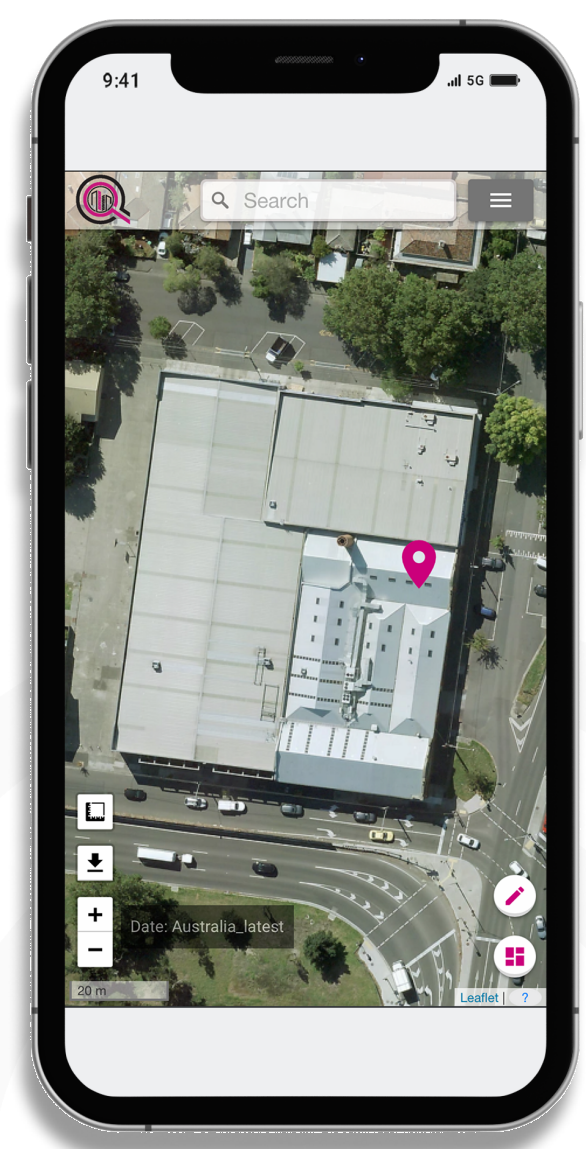

Be more efficient with Search Commercial's best in class features and allow yourself to map:

- Jobs under management
- Jobs currently out for tender
- Target areas for new jobs
- Include details such as timings of completion, size of the job and mark these with different icons.

Any of these maps created can be utilised for internal presentations to management, or for external purposes.

Search Commercial's features just made your job easier. Think about your project as a whole and let us show you how we can benefit your business.
